

A student wishing to use courses not on this list must secure advance approval from the Department by means of a petition.

The approved Directed Electives generally include: courses required for entry into other engineering majors; required and technical elective courses in other engineering majors; pre-med courses; business or entrepreneurship courses; math, statistics, physics and chemistry courses at higher level than required in the ECE core; and other physical science or biological science courses. For physical science or biological science courses a maximum of 7 hours numbered below 2000 may be counted as Directed Electives.

Individual studies or undergraduate research courses in other engineering disciplines, math, statistics, and physical or biological sciences typically may also be used as directed electives. There are limits on the total number of hours of such courses that may count toward the BSECE degree. Students should consult with their advisor to verify that such courses in a particular discipline will count, prior to taking the course.

If two classes have exclusion clauses in the OSU course catalog then only one of them may be used.

Directed Electives are not required in the Electrical Engineering or Computer Engineering programs. ECE majors are encouraged to use ECE technical electives to complete their elective requirements.

The Approved Directed Electives for the Electrical Engineering and Computer Engineering programs of study are different. If you are in the Electrical Engineering program of study this is not the correct list for you.
